TESSL SKILL REVIEW

Skill reviews on every PR.

Add one GitHub Actions workflow, and every pull request that touches a `SKILL.md` gets a scored review.
Nothing is published to the Tessl registry. When a score is low, a fix run improves the skill.

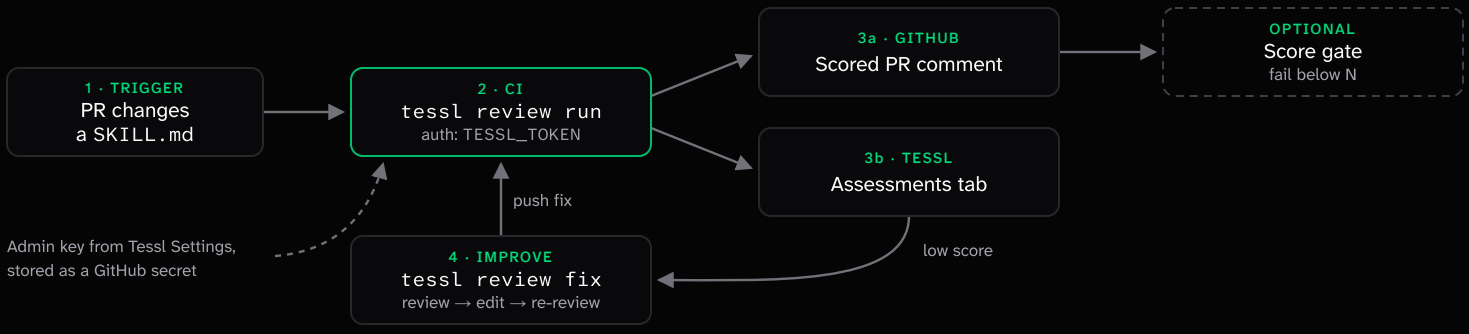

Fig. 1. The review-only loop. Nothing is published to the Tessl registry at any step.

01 SET UP ONCE

Org and SSO

Set up SSO yourself in the Tessl web app under Settings, with no ticket to Tessl. WorkOS runs it behind the scenes: pick a preconfigured OIDC or SAML provider, or use custom SAML or OIDC.

- Your existing org can become the corporate org. You can change its name and slug yourself.

02 Admin key as `TESSL_TOKEN`

Create a long-lived admin key in the Tessl web UI under Settings. The CLI can't create admin keys. Save it as the repository secret `TESSL_TOKEN` (Settings → Secrets and variables → Actions → New repository secret), so CI doesn't depend on any one person's login.

03 RUN IN CI

Add the workflow

Commit `.github/workflows/skill-review.yml` to your skills repo. The `tesslio/skill-review` action finds changed skills, installs the CLI, and runs `tessl review run quality` on each one.

```yaml
name: Tessl Skill Review
on:
  pull_request:
    paths: ['**/SKILL.md']
jobs:
  review:
    runs-on: ubuntu-latest
    permissions:
      pull-requests: write
      contents: read
    steps:
      - uses: actions/checkout@v4
      - uses: tesslio/skill-review@main
        with:
          tessl-token: ${{ secrets.TESSL_TOKEN }}
          workspace: shortrib-labs  # your workspace
          fail-threshold: 0
```

- **Inputs:** `path`, `comment`, `fail-threshold`, `workspace`, `tessl-token`.
- Start `fail-threshold` at `0` to build a baseline. Raise it once you trust the scores.
- Set `workspace` if the key sees more than one. `tessl workspace list` shows the names.
- `skill review` is now `review run`, so update old scripts.

04 READ RESULTS

One PR comment, plus Assessments

Each PR gets a single review comment, updated in place on every push. It shows a score badge for each changed `SKILL.md`, any validation warnings, and the full review in collapsible details.

- Every run also lands in your Tessl org's Assessments tab, by plugin and skill, so you can follow scores across PRs.
- From the CLI: `tessl review list` and `tessl review view --last`.

05 IMPROVE

Raise low scores with `tessl review fix`

It reviews a skill, applies improvements, and reviews it again in a loop. It stops once the score reaches `--threshold` (default 90). Then push the changes to the PR.

```
tessl review fix ./skills/my-skill -w shortrib-labs
```

- Flags: `--threshold`, `--max-iterations`, `-y`, `-w`/`--workspace`. Pass `-w` if you have several workspaces.
- Fix runs spend Tessl credits, and each iteration can take minutes. One run took a skill from 90% to 97% for about 100 credits.
- Scheduled re-runs catch drift after model changes, even when nobody edits the skill.

06 OUT OF SCOPE

Reviews only, for now

Evals and scenarios. None of the steps above use them.

Publishing. No skills go to the Tessl registry.

Harness plugins. No `tessl install`, and no changes to agent directories.
